XacTorr®
Digital Capacitance Manometer

XacTorr® CMX Series

Rugged, Stable Digital Capacitance Manometers
for Process Vacuum Measurement

Brooks XacTorr® CMX Series digital vacuum capacitance manometers (also referred to as capacitance diaphragm gauges) incorporate industry-leading features that improve measurement reliability, minimize drift, resist diaphragm contamination, and minimize thermal effects. The result is an exceptionally reliable capacitance manometer family for all vacuum measurement applications.

An important benefit of the XacTorr® vacuum capacitance manometer is its advanced Mark-IV sensor. The sensor chamber contains surface areas that are not used in the pressure measurement; these surfaces provide locations for particles and condensable vapors to accumulate without affecting the sensor, dramatically reducing the need for re-zeroing and greatly extending sensor life. The sensor diaphragm is made from corrosion resistant Inconel®.

Because they are fully digital devices, XacTorr® vacuum capacitance manometers operate over a wide dynamic range with extremely good accuracy.

Flexible digital signal processor based electronics eliminates manual potentiometers and drift associated with the aging of old-style analog electronics.

Digital precision:

- Multi-decade digital calibration provides superior window of "known accuracy"
- Real-time compensation for ambient temperature variations which improves measurement repeatability
- Intelligent zero adjustment, local push-button, and remote zeroing for ease of maintenance capability that also improves long-term repeatability

Intelli-Touch zeroing ensures that the XacTorr® Series cannot be zeroed if the pressure is too high or if the capacitance manometer has not reached a stabilized operating temperature - a common operator error with analog capacitance manometers.

Highly efficient dual-zone temperature control:

- Real-time temperature control of the sensor for improved measurement stability & repeatability
- Fast warm-up with intuitive temperature status LED
- Rapid response to changing system conditions

Features	Benefits
Patented Mark IV Sensor	Lower drift, superior protection from deposition of process gases
Dual Zone Temperature Control	Fast warm-up, close temperature control, rapid response to changes
Digital Calibration	Multi decade calibration provides superior window of known accuracy, real time compensation of ambient temp effects
Digital Architecture	Eliminates manual potentiometers and drift associated with electronics
Intelli-Touch Zero Adjustment	Cannot be zeroed if pressure is too high or desired temperature not reached

Patented Mark IV Sensor

The XacTorr® capacitance manometers utilize patented sensor technology. Unique corrosion resistant, shielded sensor design offers superior protection against condensable process byproducts. The sensor diaphragm is made from corrosion resistant Inconel®. This allows for extended operation of the capacitance manometers without degrading accuracy.

Highly Efficient Dual Zone Temperature Control

The XacTorr® capacitance manometers are offered with sensors that operate either at ambient temperature or at an elevated but regulated temperature. In case of the latter, two options are offered, 45°C, or 100°C. Brooks utilizes a highly efficient dual zone temperature control system to maintain the sensor diaphragm to within 0.1°C of the specified temperature. Such real time and close temperature control improves measurement stability and repeatability.

This temperature management system also allows for fast warm up. An LED indicates when the instrument reaches the desired temperature level allowing for reliable measurements to be made.

The dual zone control also ensures rapid response to changing system conditions.

Flexible Digital Signal Processor

The XacTorr® capacitance manometers incorporate patented advanced digital architecture. This eliminates manual potentiometers and drift associated with the aging of old style analog electronics.

The instrument is calibrated using multi decade digital calibration which provides a superior window of known accuracy.

The digital precision allows for real time compensation of ambient temperature effect for improved measurement repeatability.

Intelli-Touch zeroing via a local push button or remote for ease of maintenance, ensures that the instrument cannot be zeroed if the pressure is too high or if the gauge has not reached a stable operating temperature. This is a common source of operator error with analog capacitance manometers.

Independent Communications and Diagnostic Interface

The XacTorr®'s RS-485 diagnostic port provides a unique, independent means of communicating with the gauge without having to “interrupt” tool communications. This allows monitoring and data acquisition capabilities simultaneously with gauge operation, for chamber and tool matching along with “real time” advanced troubleshooting.

PERFORMANCE		
Operating Temperatures:		
CMX0	Ambient	
CMX45	45°C	
CMX100	100°C	
Full Scale Ranges	0.1, 1, 2, 10, 20, 100, 1000 Torr	
Accuracy¹	CMX0: 0.25% of Reading CMX1, CMX2: 1 to 1000 Torr Ranges = 0.15% of Reading, < 1 Torr Ranges = 0.25% of Reading	
Measurement Range	4 Decades	
Temperature Effect on Zero	0.002% F.S./°C	
Temperature Effect on Span	0.02% F.S./°C	
MECHANICAL		
Exposed Materials	Inconel® and/or AISI 316L Stainless Steel	
Over-Pressure Limit	17 psia or 125% of Full Scale, whichever is greater

Vacuum Capacitance Manometers

XacTorr® Series Model CMX160

High Temperature
Digital Capacitance Manometers
for Process Vacuum Measurement

XacTorr®
Digital Capacitance Manometer

Brooks' CMX160 (XacTorr™) is a compact heated vacuum gauge providing accurate total pressure measurement independent of gas composition. The CMX160 Series' digital architecture delivers improved performance, enables in-situ diagnostics and data logging facilities while maintaining an industry standard analog interface.

Designed for demanding thin-film processes such as LPCVD Nitride and Metal-CVD, the CMX160 Series provides superior reliability by combining Brooks' patented shielded sensor technology and patent pending digital temperature control, greatly reducing the buildup of process condensable products that lead to process drift and premature failure of the gauge. The CMX160 Series is offered in multiple ranges and supports industry standard electrical interfaces, ensuring an upgrade path from legacy analog capacitance manometers.

Flexible digital signal processor based electronics eliminates manual potentiometers and drift associated with the aging of old-style analog electronics.

Digital precision:

- Multi-decade digital calibration provides superior window of "known accuracy"
- Real-time compensation for ambient temperature variations which improves measurement repeatability

Intelligent zero adjustment, local push-button, and remote zeroing for ease of maintenance capability that also improves long-term repeatability:

- Intelli-Touch zeroing ensures that the XacTorr Series cannot be zeroed if the pressure is too high or if the capacitance manometer has not reached a stabilized operating temperature - a common operator error with analog capacitance manometers.

Highly efficient dual-zone temperature control:

- Real-time temperature control of the sensor for improved measurement stability & repeatability
- Fast warm-up with intuitive temperature status LED
- Rapid response to changing system conditions

Features	Benefits
Patented Mark IV Sensor	Lower drift, superior protection from deposition of process gases
Dual Zone Temperature Control	Fast warm-up, close temperature control, rapid response to changes
Digital Calibration	Multi decade calibration provides superior window of known accuracy, real time compensation of ambient temp effects

Option Zero Bias (Indy) 15-Pin D Sub Configuration

- Superior ambient operating condition capacity (15 - 50°C)
- Ability to locally adjust zero bias output via external rotary switches.
- Zero consumption warning - triggered when 80% of adjustment range has been used.
- Two process setpoint dry contact relays.

	4	15-Pin D Sub Connector with 2 Process Relays and a Temperature in Control Relay
	5	15-Pin D Sub Connector with 1 Process Relay, 1 Temperature in Control Relay, and an Overheat Indicator Relay
V. Fitting*	0	1/2" Tube Stub
	1	KF-10 Flange
	2	KF-16 Flange
	3	KF-25 Flange
	4	8 VCR [®] Female
	5	Mini CF
VI. Calibration	(Blank)	Calibration Orientation relevant to 1 Torr full scale range only**
	V	Horizontal
	V	Vertical
VII. Calibration	R	RoHS Compliant

Include Option Code "R" in the CMX Part Number field in order to receive RoHS Compliant devices. Option "R" is not available for 9-pin or DeviceNet Connector options.

Sample Model Code

I	II	III	IV	V	VI	VII
CMX	3	T11	2	1	V	R — Required for RoHS Devices

* Contact Brooks Technical Support for other options.

** Full scale range above 1 Torr is not sensitive to mounting orientation.
